

PowerLight

The only power supply for organ builders, safety inspectors and occasional weaklings

That's the snag with power supplies. Many cope with demands, yet don't meet national standards. Some meet standards, but can't cope with surges. And some perform, but weigh a ton.

That's enough worrying. PowerLight delivers all. Using the same compact power technology as RVs and boats, SSOS have created an organ supply that satisfies all demands, meets UL, CSA and FCC standards, responds to surges and won't give anyone a hernia.

Failure-free performance

No matter how much an organist abuses an organ, PowerLight carries on working. Its own circuits continuously check the power demand, and reduce the voltage a little to maintain the current.

Change every stop and play a massive chord in one go, and PowerLight won't trip out.

- 30, 55 and 75 amp outputs with adjustable voltage
- 110V or 230V versions in stock
- Meets UL458, CSA C.22.2 No. 107.1 and FCC part 15
- Protected against overload and unexpected tripping
- Lightweight
- Well priced
